## Waste Management Policy

This Waste Management Policy forms part of the Company's sustainability framework and underpins the Company's sustainability policy

The policy aims to reduce the negative environmental impacts of our waste, to reduce landfill waste and to ensure disposal of waste materials is in an environmentally responsible manner.

We recognize we need to reduce the unnecessary use of raw materials and will enable waste recycling, composting and energy recovery to assist in reducing landfill waste.

The company is committed to the implementation of an effective waste management programme that meets or exceeds all legislative and regulatory requirements placed upon it.

### POLICY AIMS

The Company's waste management policy is based on the principle that priority order of action is to:

**Reduce waste produced:** Through purchasing policy, operational activity and by raising awareness, reduce the waste that will be created for disposal.

**Re-use:** Before discarding items, take action to re-use in the first instance within the company and if this is not applicable, with external nominated organisations and contractors. Every avenue of re-use of items must be explored before being discarded as wastes.

**Recycle:** The Company has the facility to recycle significant quantities of general waste and is increasing this provision and its targets as new markets are developed for recycled materials. Where practical and viable the Company's procurement activities will support these markets for recycled materials.

**Minimum waste to landfill:** Redundant items that cannot be dealt with other than being disposed of, will in the first instance, be considered for heat recovery before being sent to landfill as a last resort.

**Risk Minimization:** Including considering the end-of-life disposal (costs and environmental impact) when making purchasing decisions and developing activities.

Complying with regulations, legislation and applying best practice in order to minimise risks of immediate and future pollution or harm to health by disposing of waste appropriately.
